ABSTRACT

PT. Telekomunikasi Indonesia, Tbk or PT TELKOM with its Flexi is one of CDMA operator in Indonesia. Telkom Flexi is handled by division Fixed Wireless Network (FWN). This division has responsible of network performance of Telkom Flexi. Network performance can be measured from traffic data. The data is counted and saved in Microsoft Excel which is still semi manual. Distribution of data got trouble. This cause the result is not effective and the time is not efficient.

It is building from six step. There are study phase, identification the probem of system scheme phase, build phase, construction phase, development of software phase, analyse result scheme phase, and conclusion and suggestion phase. At development of software, application use PHP language programming, which supported by MySQL database.

From research result which have been done to be obtained conclusion, this system applicable to process the data of management network performance and give ease in running process that happened among user, able to earn accessed within online through network under web.

Key word : Management Information System , Network Performance
