Abstract

Editorial retrieval is needed in order information finding from news can be done effectively andefficiently. Editorial is main article in the newspaper which is the view of editor against an event was being discussed when the news was published. There are some methods can be applied to build a system of editorial retrieval, one of them is textrank. In this system, textrank is used to main event finding that to be one of aspect in editorial retrieval by predicting the value of important of each sentence as graph based ranking method. The results of editorial retrieval will be evaluated by using ROUGE method, to count the performance of system in editorial retrieval.
