

ABSTRACT

Indication of technology development is exquisite in these days. And also for fulfilling life needs which is shopping. Just for record, these days transaction via internet is really huge. It is efficient, we don't have to visit the store but we could still have what we want. But the conventional way by visiting the stores wouldn't be abandoned. But what kind of stores would be favorites to be visited? of course the one which offers easiness, effectivity and efficiency. Thus one stop shopping concept created. it's a concept to buy any needs in one place to stop. The problem is with one stop shopping concept, do the customers know where is the location of the stores or comparison of the price they need from stores which are provide what customer looking for?

In this paper, one stop shopping portal built in android platformed smartphone which could help customers to know information about goods or even the seller from department stores. This application run in a gadget which is web-based and web-app for android platformed smartphone

From the test with 30 respond, the result for every question asked are, 67% told that the application is easy to understand and works great, 60% told that this application is easy to acces and helps customers in looking for the seller and goods. This application works great in HSDPA connection with overall working time 6.572 seconds.
