ABSTRACT

Medan, is one of tourism destination in Indonesia. Medan gives various choices of tourism for visitors. Especially for them who love a traditional food from the visited region. Medan has a lot of local and traditional culinary choices to enjoy. If the visitor never went to Medan before, they will search for the info as much as they can find.

This application designed to be a guide book for the tourist to get the information about culinary in Medan. Implemented in Android Smartphone, it will be really easy to be accessed because it is mobile device and also because Android operating system is developing in public. Integrated in the external database of MySQL, so the data update will not affect the application, also there is GPS feature using Google Map service, to show the position of user dan the culinary place.

The author hopes with this application, it can be implemented to the public or tourists who visit Medan to help to find the information about Medan culinary and also to guide so they can reach the location.

Keywords : Medan City, Android, Database, MySQL, GPS
