

ABSTRACT

Journalist is a job that requires to be responsive, alert, and aware about events around him. There are a lot of equipments used to support the work of journalists. There are camera, recorder or a tape recorder, notes, laptop, and many others. After getting the news, journalist must draw it up into a decent story to publish. After that, the journalists have to submit to the editor to be edited before published.

From that problem, can be seen an opportunity to build an application that can be used by journalist. The platform that use to build this application is Android. E-Publisher application provides basic needs of journalists in gathering the news, arranging the news, until publishing the news. This application will have an external database that is accessed when journalists run the application, the advantage of this system is a dynamic database.

With this application, journalist can do his works easily and efficiently. After testing directly to Bandung Ekspres Newspaper Company and Net TV, 80% of 10 respondents stated that E-Publisher application can be used to do their works. In addition 70% of respondents stated that, this application can replace the older system.
