ABSTRACT

Police report is a writen statement made by police officer about notice conveyed by some people for the right or obligation based on the laws of crimes that will, currently, or already occured. In the process of the investigation, the informant will recieve SP2HP which is containing the investigation progress. Mount of crime in Bogor makes Police Report increases, and so are the SP2HPs published to society.

The person who is in charge of making Police Report is Unit SPK Polres Bogor Kota with recomendation of Satuan Reskrim Polres Bogor Kota. In fact, these two divisions are devided by remote office location, hence Police Report distribution often has some issues and takes longer time. Besides, people generally do not get the progress of investigation itself.

To overcome those issues, building data management information system Police Reports for publishing web -based development of the Notice of Investigation Results (SP2HP) is built to maintain Police Report and facilitate the public to know progress their investigation. This system is made using the Waterfall system development methods.

The result of this system develompment can simplify and accelerate the distribution and management of Police Report on Satuan Reskrim Polres Bogor Kota and help people to receive the investigation progress of the report .
