

ABSTRACT

Lately The World of IT or Information Technology is growing so vast. This can be proofed with how fast the processing data are performed by a computer, whether the amounts of data were small, medium or even large. Beside that, the advance in telecommunication also helps the progress of Information Technology. Even today, many companies require the use of information technology in every business aspect and it also increase the Coast of IT development in order to remain competitive with other companies.

The function of the computer itself are many. One of its functions is the processing and calculation of data with fast, precise, and accurate. Although there are a high rate of processing and more advance technology its been carried, that could not guarentee the optimal use of a computer itself.

"Lariz Store" is a private company which sales many goods of daily needs. Lariz store is an intermediate trading business that have a lot of customers and suppliers. The sales and purchases system in Lariz store are still using manual systems and does not maximizing the modern technology even with hundreds number of transactions every week, with each transaction itself can be consists of several items. The newest system is also needed because the current sales turnover can reach millions every week.

To be able to support it, it needs an application that can help the transaction process, assisting the management of data items as well as stock taking process and helping prepare the reports that required by the store owner.

Keywords : Lariz Stores , Retail Stores Applications , Information Systems
