

## ABSTRACT

Revenue is all of cash revenue and collection rights arising from the delivery of goods or services to other in a given period are entitled to a company. Bandung District General Hospital is a Local Public Service Board (BLUD) in which the utilization of technology in the financial section is insufficient for making revenue journal to the revenue reporting, accounting processes are still using Microsoft Excel so that they appear as problems of data duplication, data input error, the error when copying data so reporting revenues not real time and inaccurate.

The utilization of Sure Step implementation methodology, which is the best implementation method for Microsoft product is required as a guideline to understand the procedure. Sure Step method begins with a diagnostic phase which identifies problem, restricts on the problem, and defines goal with the support of literature study and field study. The next phase is analysis phase which compare existing business processes of financial section in Bandung District General Hospital with Microsoft Dynamics AX 2012 business processes. This phase will result a gap analysis and proposed business process. In the design phase, master data migration plan and testing criteria were created. The last phase is the development phase where the system in Dynamics AX is configured, the data is migrated, and system can be tested.

The purposes of applying Revenue Accounting System to the Microsoft Dynamics AX 2012 is used to solve the problems in the financial section of Bandung District General Hospital ( RSUD Kota Bandung) specially in revenue accounting process.
