

ABSTRACT

Tourism is one of the activities that are in vogue by the people of Indonesia today. However, the development of tourism sector is not accompanied by the use of technology as a means of supporting tourism. This is very necessary because the use of technology can help the development of tourism more rapidly and facilitate the community as a potential tourist in searching for information in full, not only information about tourism but transportation and hotels become an important part in tourism. The solutions available are android based applications that can help provide information on tourism and hotels and transportation. This application is called as Application Of Travel Recommendations Based On Android. In this final project provides some features such as providing travel recommendations, hotel recommendations, and transportation recommendations. In addition, there are features to do tourism planning with budget simulations, and cities.
