ABSTRACT

Web app review of web-based goods and services (RIPIU) is an application that provides information about goods and services. Information about goods and services when it is rare because there is no place or container to accommodate information about good goods and services. Making a web app review of goods and services is very important to be able to create a container or a good place to search information about goods and services can be easier and faster. Solution obtained if this application is there, the user does not need to search for information sources about goods and services everywhere, users can directly find information about goods and services in this application, not only that users can also review the goods or services they have been using , So that other users know the benefits of information about the goods and services, not only that this application will also have management by the administrator and the application has rules for the user for the user more comfortable to use, in addition to the management is also done on the part of the data reviews Which has been provided by the user to keep it properly stored. This application will be created using the codeiginiter framework and using the MySQL database. With the application in expect users can be easier and convenient to give or seek information about goods and services

 keyword: information, goods and services, admin.
