ABSTRACT

Indonesia is one of countries in that familiar with natural disaster, and has many disaster-prone areas as well. Based on the disaster data and information on the website National Agency for Disaster Management, until the month of November 2016 there's some 2.175 cases of natural disaster that occurred in Indonesia. Which is flooding that has dominated perentage as natural disasters frequently occurs in Indonesia. Natural disasters can't be avoided, but would be good if we had the early realization on society, especially for children as Younger Generation and parents as the protector to aware about anticipate natural disaster, especially flood. That then means, the goal form this research is to make a media about anticipate for facing natural disasters. By using qualitative data collection methods such as literature study, observation, interviews, as well as a SWOT analysis method. The results of the design is in the form of book illustrations preparing for natural disasters like the stuff what needs to be done before, during and after a natural disaster
