

ABSTRACT

Educational toy is the kind of toy that can give you specific learning users (children). Play is also a fun activity for children and has the benefit of increasing the level of social interaction, practice self-confidence, and also good for fine motor development of children, especially ages 4-6 years. At the age of a child's development is very important characteristics are applied, this is due to the process of child development is very rapid. Moreover, in terms of diverse activities, the role of kindergarten teacher observed by researchers pay attention to each child's play activities while also limiting children's toys, as well as assisting children in play activities for children not only know one kind of game only. Therefore, designers try to develop a child's toy in which there are important aspects of child development, by implementing educational games that can stimulate fine motor work system.
