

## **ABSTRACT**

*Notice is a company startup that provides solution software in education. Student Monitoring System is a solution to help school and parents to monitor the student in school. Graphics on student development is also provided to help parents guide the student according to their particular interests and gifts. This research is about how to build an application system that will manage selling, promotions and communications with customers. Scrum as a development framework is chosen, because of its ability to cope with complex problem with an innovative approach. On customer's side this application provides transactions, problem tickets, transaction management, and live chatting with customer support. On owner's side balance report, transactions report, package management and problems management are provided. These features are provided as a communication solution for sellers and buyer and in return will help sales and customers loyalties.*
