ABSTRACT

Public Company (public corporation) Perhutani Unit III is one of the State-Owned Enterprises which has authority for planning, management, business and security in Banten and West Java. Perum Perhutani has a strategic role to support environmental sustainability system, socio-cultural system and economic system of forestry society. How to improve the quality of applying it. In order for its development requires the strategic design of business and IT Enterprise Enterprise to be able to develop the functions of Perum Perhutani operations. Enterprise Architecture (EA) is a unified whole of the principles, methods, models used in planning and execution, EA design also requires a framework to identify the scope of the architecture to determine inter-regional relationships. There is one kind of framework that can help to show the concept of enterprise architecture can use TOGAF. This TOGAF framework is an Open Group standard that has proven to be used by the world's leading organizations in improving business and IT efficiency. TOGAF is used because it has some privileges of errors in the architectural development phases (architecture development method) done in sequence. The phases of TOGAF ADM are Early Stage, Architecture Vision, Business Architecture, Information System Architecture, Architecture, Opportunity and Capital Solution to Migration Planning. In this study using TOGAF ADM can produce business model artifacts and IT as a reference For Perum Perhutani Unit III for business and IT development.
