ABSTRACT

Klinik Pratama Abdi Husada is a clinic that gives facilities and services about health. About medical record, the doctor do to write a patient's medical record in medical record card and on the connecting book. Look for patient medical records is still done manually by searching one by one. Besides, the financial records in the form of income and expenditure are not so described in detail and the financial statements do not provide information on how the profit or loss earned by the company and financial statements have not been recorded in accounting. As for the calculation of physician services are still done manually based on the number of patients who come. This web-based application uses structured programming language and MySQL database. The method used to build this application is the waterfall method. This application can handle the management and search of patient data, record and store patient medical record, manage expense and general journal, ledger, and income statement.

Keyword: Medical record, expenses, income statement
