

ABSTRACT

Web Based Application For Administration Monitoring At Mentoring Units Of Telkom University is sourced from Telkom Badan Mentoring performance procedures of the University. The methods used in developing Monitoring administration of BM (Badan Mentoring) this is the method of System Development Life Cycle (SDLC) model with a Waterfall. The PHP language is the basis of programming in making this Web-based application. Users of this application include, namely the Executive Board of the Badan Mentoring Program, Basic Public Lectures (PPDU), lecturer, students who take courses of religion (the mentee) and students who provided the material (mentor). This application was created to facilitate the Badan Mentoring caretaker party in monitoring the administration of the performance of the BM during the process of mentorship, so the reports given to the lecturer and PPDU can be given on time. Starting from the grouping of students who follow the mentoring, mentoring, do collect administrative mentoring and Badan Mentoring or big event called the Big class and monitor the results of Badan Mentoring administrative performance of the BM to the PPDU.
