

ABSTRACT

Hocamie is a company engaged in the culinary field. Hocamie is the name of a restaurant and ramen noodles are located in Jl.Terusan Buah Batu Bandung Bojongsoang 271 Lengkong. At this restaurant provided plenty of food and drink menu that can be directly ordered by the customer. At first the main menu on sale are chicken noodle, ramen and other menus such as menu hotplate only complement it. The background of this application is an attempt Hocamie are still difficulties in merekap sales, and inventory management. Recapitulated sales transactions using notes and entered on Mc Excel. The bill of sale is numbered notes and table number. The data entered sorted according to the memo number. Because the process is still manual, input data is sometimes not appropriate, as their numbers "jump" and not the same as the order of the memorandum. The purpose of making this application is to generate a list of inventory stock, sales reports, journal, and Ledger. This application uses prototype method as a method of execution, as discussed programming using PHP, and MySQL as the database.
