

ABSTRACT

Internet users in Indonesia in 2016 reached 132.7 million using the internet quoted from KOMPAS. But many use the internet to access illegal content or negative content. So internet service providers create a configuration that can restrict their customers from accessing illegal content. But with a tor onion browser, internet users can still access content blocked by internet service providers. So that required configuration that can block browser tor so that internet user can not use browser tor. The method used in building the configuration on mikrotik is by blocking the ip tor node, so the system will automatically block the data connection from the browser tor. So when the browser configuration block tor on mikrotik enabled, internet users can not use browser tor.

Keywords: Mikrotik, Router Mikrotik, Firewall, Tor Onion.
