

ABSTRACT

CV Aman and Maju is a company engaged in the distribution of the household appliances and electronics. This store is a distributor took somethingsofromthesupplier to market and sell it. Business processes that occur in CV. Aman & Maju is the process of purchasing, sales and inventory process. The purchase process is a process of purchasing goods to suppliers for resale, at the time of purchase to the supplier of this store only use the receipt and record it into microsoft office, in this process often error in inventory calculation because there is no integration between the purchasing process and inventory and will effect on inventory reporting. Sales process is the process of issuing goods to be sold to the customer, in the process of selling this CV. Aman & Maju will determine the selling price to be recorded into the sales invoice, determine the selling price is still very manual so often mistakes in determining the selling price causing this company experienced loss. All processes that occur in CV. Aman & Maju done by the admin. Based on these problems, in this study proposes an application that handles business processes with one integrated database between purchases, sales and inventory. Applications can also handle sales in determining the selling price and generating sales invoices. Applications offered will utilize the PHP programming language and use MySQL.
