

ABSTRACT

Bandung is the capital of West Java province located in the middle of Java island. Bandung city environment is good because it is seen from the public spatial arrangement arranged neatly as the availability of public facilities as a supporter of Bandung society. Bandung is also known as a city that has enough city parks in accordance with Berhiber slogan which means Clean, Green, Flowering becomes the slogan of city arrangement,

One of the interesting city park environments to visit is Gasibu Park or often called Gasibu Field because this city park has a large field in it we can do activities such as sports and relax with family. But for public facilities in this park, it is still lacking, therefore a clean water filtration product and map are designed.

Drinking Fountain and maps are designed to solve some of the problems contained in the location of the gasibu field. Clean water filtration is a water purification system using a gradual filtration method so that the results of water filtration can be consumed directly. It is expected that visiting tourists do not feel thirsty during the day because it can directly drink through the filtration of clean water and when the wizard requires directors to go to a place to eat, mushola with the location map of gasibu field then it is expected that the residents are not confused when determining the direction. The design of the above products aims to facilitate tourist sites and to attract more tourists.
