Anthropometry is an essential factor for users of the products they use, the incompatibility of the user's anthropometry on a product will cause an impact of fatigue that ultimately imbalance the body. This is one of them occurring in a seats ship used basarnas team. As a manufacturer of rigid vessel seats certainly must consider the anthropometry of users in the design of rigid basarnas ship seats. The design of rigid vessel seats that have been so far less pay attention antropometri rescue team, especially on the distance of a chair that impact on user activity, so need further research on the seat distance on a ship with the application of anthropometry aspects to fit the user's body.

Keywords: Anthropometry, Rescue Team, Seat of rigid basarnas
