

ABSTRACT

Bekasi city as one of the city that has the most populous population in Indonesia, of course need to be supported by existence of education facility whether it is one of procurement from government and private side. It is evident that the local government of Bekasi City along with the private sector supports the progress of education for the people of Bekasi City, this can be seen from the many schools - both public and private schools.

With a densely populated population, Bekasi City has not been able to balance the provision of one of the educational facilities such as libraries that are standardized in accordance with the provisions of the government. Some parameters that can be a gauge of non-fulfillment of Bekasi City library standards are less strategic places, there are still many people who do not know where the location of Bekasi City Library, the area of the building is less extensive, the facility is not complete and the book collection is not complete.

Seeing the above problems it is necessary to design a new place or area to find information and read that comfortable and interesting that can meet the needs of residents of Bekasi City for all walks of life.
