ABSTRACT

Vocational High School (SMK) is one of the secondary education levels with specialization to prepare graduates to be ready for work. Based on these descriptions, Vocational High Schools are very important to prepare students who are ready to work. An example is Pasundan 1 Vocational School located in Bandung Regency. At this school all records are manual, and have not implemented records according to the Accounting Standards. Web-based applications are built with object orientation methods, the development of these applications uses Waterfall SDLC and uses the PHP program and framework codeiter. The functionality of this application is recording cash receipts, recording cash disbursements, general journals, ledgers, and cash flow reports. This application uses black blox testing.

Keywords: Administration, Finance, PHP, Codeigniter
