**ABSTRACT** 

ABAREL is a business engaged in fashion, especially jackets. ABAREL does not

produce its products independently but is still through vendor collaboration and

selling them through online media. Even so, the quality of ABAREL products is

made to the maximum extent possible because the chosen vendor also has a good

reputation.

In this study, researchers will provide advice to increase company profits by

making estimates of production that should be achieved so that profits can

continue to increase. This will also have an impact on the capital that will be

needed but along the way will also increase the company's profits.

In this study, the method used is by conducting a feasibility analysis as a basis for

determining company profits. In this study important aspects will be taken into

account starting from the market, technical, and financial aspects so as to find the

best decision for the company.

In this study, market research was conducted by making questionnaires, namely to

find out the target market to be targeted. In addition, sales data is also taken to

predict the sale of the next period.
