Textile and Fashion Craft Study Program

Cireundeu Batik motif is one of the basic foods of Cireundeu village, namely cassava leaves, which is an inspiration in the depiction of motifs. Cireundeu Batik motifs are generally processed traditional ways, namely batik and stamp. The batik processing process takes a very long time and requires professional staff so that the resulting motif is neat. In addition, Cireundeu batik motifs can potentially be further processed with other techniques, namely computer machine knitting. Knitting computer machines is able to work on batik motifs with a very fast and precise time so that the formation of motifs is perfect and does not require professional staff in making motives.

In the study students made observations to the place of Cimahi batik craftsmen namely Overtime Batik to see the potential of colors applied to the Cimahi Batik motif, especially the Cireundeu batik motif. Students study literature by visiting the official website of one of the Cimahi Batik craftsmen, Sekar Putri, to see the potential colors and patterns of the Cireundeu Batik motif used. From the results of student observations, it can be concluded that Cimahi batik craftsmen use motifs from the development of Cireundeu batik motifs.

The output of this research is the processing of the original motifs used but only the isen component is removed. As well as the selection of outline colors and the background must be contrasted so you can see the color of the Cireundeu batik motif. The product produced is a sweater dress.
