Abstract

Lack of communication and information between garbage collectors and customers in the RT 05 RW 01 area of Lengkong village in Bojongsoang sub-district and surrounding areas has caused several problems, such as garbage that accumulates and the environment is not clean. The low level of education of garbage collectors also affects the occurrence of these problems. By designing information system applications the author can solve the problem. The application was designed using the UCD method so that the application has a high usability level.
