

ABSTRACT

Rumah Sakit Umum Daerah Soreang is a company that operates in service sector. There are some installation services available in Rumah Sakit Umum Daerah Soreang which are inpatient services, outpatient services, emergency services and subsidy services. Some health facilities are needed in order to support the service itself. The process of service procurement in Rumah Sakit Umum Daerah Soreang is still doing manually through Microsoft Excel. Therefore, this procurement of health service application is created with object-orientation method, developed with waterfall model, also by using PHP program and framework code igniter. This application is able to make goods order, making the process of procurement with computer-based, also creating a journal, ledger, inventory stock, inventory report, receipt report, and expense report.
