

ABSTRACT

Kedai Nonie Store is a company engaged in the trading company that sells kinds of souvenirs typical of Bandung. All transactions that occur at the company still apply manual recording. Each recording of transactions that occur is recorded in an excel and the determination of the selling price of a product is still manual because every financing that occurs in the production process is recorded in a book so that the possibility of recording transactions in the production process is not included in the book in detail, inconsistency in recording books will result in recording in the accounting report or financial section will be complicated. With the development of technology, built an application that can handle the process of buying, selling and calculating the cost of production with the existence of this application can help owners and employees who work there to make valid data. With the existence of a programming code or CI-based, My SQL and Black box can manage master data, transactions, and reports. This application can run programs, such as adding account data, raw materials, finished products, labor, factory overhead, purchasing raw materials, calculating the cost of goods, selling finished products and transaction reports, so that applications are made to make the sales system easier for the company.

Keywords — Purchase, Calculation Of Cost Of Production, CI, My SQL.
