ABSTRACT

Development of information continues to increase and the need for information should be timely and rapid rate of development will affect the business, both in terms of information management needs as well as the operational side. Such as that faced by Greens Production. Product sales system is still somewhat less lags with headway technology today, such as the difficulty of the consumer to know the details of the desired product prices and the difficulty of ordering products convection often happens and media errors his coverage of the promotion was little cause Greens Production Bandung less known by many consumers. Then the purpose of the research is carried out to design an information system product sales and booking web-based convection which can make it easy for the consumer to know the detail information of product prices and expand the range of consumers so that products can be recognized by many consumers. In making this application method using SDLC model Waterfall, the programming language used is PHP and HTML with the Codeigniter Framework. His expectations with its information systems this website can increase sales profits in Greens Production.
