Technology means tools as well as medium which facilitates human activity and always being updated along with necessity and current development. In fashion industry, one of the technologies that is used to make one design easy to be made is laser cut. Laser cut technique can cut a complex design and micro size, therefore that opportunities are used as reference to make forms' design with the inspiration of edelweiss shapes that have micro size. On the other hand, modest fashion is being a trend and Indonesia will be the qibla of the world's modest fashion. Seeing the opprotunities of laser cut technique in Indonesia's fashion industry, writer applied the laser cut technique as the embellishment making process on modest wear.

This research is using qualitative method, i.e. literature study, observation and experiment. Literature study was done by collecting datas through books, journal and internet. Direct observation was done at the laser cut vendor and indirect observation was done by collecting datas. Experiment that had been done produced an embellishment with edelweiss shapes that cut by laser cut technique. Addition techniques that was added to produce a visual of edelweiss are layering and beading. The results of embellishment that had been produced using laser cut technique are applicated on the modest wear.

Key words: laser cut, embellishment, modest wear.
