The rapid development of information technology today, making many companies trying to adopt the latest information technology to help the business smoothness, one of which is the company's event organizer service. Bastari is a startup company that provides services in Event & Wedding Organizer operating in the area of Jakarta, Tangerang and Bekasi. In a service provider such as Bastari Event & Wedding Organizer should be able to take into account the success factors before holding events such as the date and capital determination factors to run an event, the concept of determining the event The relationship factor with the sponsor or partner, the availability of the team of workers who are experienced and competent in the field.

Based on the above exposure, the four factors become very important considerations before an event is carried out, so that the event will be held successfully points-the points should not be considered a trivial thing. The solution to the above problem is to design information system based on Enterprise Resource Planning (ERP) using Odoo 13 performance management with possible Rapid Application Development (RAD) method. In the design of the system, researchers conducted interviews and observations on the company to design the current business processes that will be compared with the proposed business process according to the Odoo 13 that will be applied to the system. Then it will be tested against the system using blackbox testing whose enable will be used as a benchmark whether the system can be used or applied to the company so that it will later be a solution to Problems in Bastari.
