

ABSTRACT

Indonesia is an agricultural country where agricultural land is quite extensive. Most Indonesian residents have jobs as farmers. With the times, the success of the development of the Indonesian economy in the agricultural sector is also influenced by the role of agricultural technology that is always developing to help smooth the production of agricultural products. Therefore the need for an official media that can assess all the needs of the smooth production of agricultural products. Office conditions must be able to become comfortable working media and support the privacy of each employee.

The Office of Agricultural Technology Assessment Office is one of the media that is expected to be able to support supervision in the agricultural sector. In Indonesia, there is at least 1 office in each province. Bandung is the city chosen for the existence of the Office of Agricultural Technology Assessment Office for all regions representing the scope of the province of West Java. There are several problems in the office of the Agricultural Technology Assessment Office. So a redesign at the West Java Agricultural Technology Assessment Office is needed to provide working media that support the privacy of each individual.
