

ABSTRACT

Daar El-Qolam Islamic Boarding School or often also called Darqo is one of the modern boarding schools in Banten, precisely located on Jl. Raya Serang, Pasir Gintung, Jayanti, Tangerang, Banten. The relationship between children, parents and boarding schools also plays a very important role in the process of continuing education in the Daar El-Qolam Islamic Boarding School. The ease of accessing various information from pesantren such as daily activities, the registration process, re-registration and grades are things that are expected by parents to monitor their children's growth and development. Parents' concerns for children have become very common, especially for children who have just graduated from elementary school and first child. It is unfortunate that Daar El-Qolam Islamic Boarding School does not have a solution that makes it easy for parents to monitor their children's development at the Islamic boarding school. An application that contains a variety of information about daily activities, learning processes such as grades and absenteeism, registration processes such as monthly tuition payments, and also monitoring health are expected to be able to overcome this problem. The design of this digital media uses a qualitative method through a questionnaire distributed to students' parents at the Daar El-Qolam Islamic Boarding School. Conducting interviews with boarding schools and digital media experts. Then analyze the strengths, weaknesses, opportunities and threats through SWOT. The author hopes that this digital media design can help parents to monitor their children's development at the Daar El-Qolam Islamic Boarding School.
