*Avocado plants are plants commonly found in Indonesia. Avocado skin is avocado waste that has not been widely used, even though the waste can be used as a natural dye. In natural dyes there are many techniques one of the technique is shibori. Most of the shibori techniques have been carried out by local brands using indigo natural dyes, so researchers have found developments to utilize avocado skin as natural dyes for shibori techniques in fashion products. The aim of this research is to develop avocado skin natural dyes with shibori techniques to make fashion products.. The method in this research is experimental with study of literature, observations and interviews. The results of experiments in the use of avocado skin for natural dyes with shibori technique have optimal results on cotton fabrics by using the final mordant to make fashion products.*
