The use of natural dyes in Indonesia has been done for a long time and has even become an important part of the development of local textiles. From many types of natural dyes used, there has been no processing of natural dyes for textiles that produce green colors. This is the background of this research in the processing of mixing natural dyes to be applied on clothes. This study uses qualitative methods through literature studies, field observation, interviews and experiments which include mixing natural dyes between indigofera, tegeran and jalawe. The application of green colors on clothes with environmentally friendly concept can provide a reference to the public in the realm of fashion.

Keywords: Natural Dyes, Indigofera, Tegeran, Jalawe, Green Color, Clothes, Environment Friendly
