

ABSTRACT

In a café, chairs become one of the supporters who have the beauty to support a café concept, but often forget the value of visitor comfort. This is the basis for taking a case study at the Abraham and Smith café at Bandung, because the use of used oil drums as seats in its operations and obtaining complaints from managers will be uncomfortable for café visitors. As for the related case study, he proposed to redesign the chair by applying anthropometric aspects in turning a used oil drum into a chair. The purpose of this redesign is to find out the anthropometric aspects that applied to a chair and realized in the redesign of this oil drum. It is that the proposed redesign of chairs based on anthropometric aspects can help in providing comfort for visitors to the Abraham and Smith café.

Keywords : redesign, anthropometric aspects, chairs, used oil drums
