

## ABSTRACT

This proposal aims to design seats devoted to reading facilities at the bus terminal. This design proposal is set in the terminal at Leuwi Panjang, Bandung. The reading facilities at Leuwi Panjang terminal initially had a large number of readers, but since the available reading chair was damaged, the user of reading facilities at the Leuwi Panjang terminal was reduced. The design of this reading chair uses a comparative method with existing reading chairs and methods. Information gathering used was a field survey, literacy study, and questionnaire. The limitation of the problems of the design of these chairs include ergonomics, functions, and materials. Chair
