# Abstrak

Information systems strategic planning (PSSI) is a collection of strategies that describe the objectives of the system and technology architecture. PT Etos Indonusa is a company that applies information technology to support its business functions. Based on the results of interviews with the section head IT, the company requires the development of a system that is already owned at this time, because at this time the features are not yet complete so the data owned by the company are not optimally integrated. This caused the section head IT PT Etos Indonusa to see the need for information systems strategic planning. This information system strategic planning was created using the Enterprise Architecture Planning (EAP) method and produced an IT blueprint document. IT blueprint documents produced will also be tested with the Enterprise Architecture Scorecard (EA Scorecard). The results of tests conducted by the section head IT were 91.4%. This research also produced a prototype of one of the features that is currently a priority for the company's needs.
