ABSTRACT

From another perspective, music is also an economic commodity. Musicians will get an honorarium from every show that musicians do at events or events. Event owners, event organizers or cafe owners often find it difficult to find the right musicians they want. Musicians also find it difficult to get the opportunity to appear at music events or events, even though these musicians have the potential to entertain. With the development of technology, it can become a place for musicians and the music industry, as is the case with an application to make it easier for orderers to order musicians according to their wishes.

With these problems, this study intends to create an Android-based musician ordering application as a forum for developing musicians' work and turning ordinary musicians into professional musicians. In this application there is information about musicians and displays the prices of the musicians. The application development uses Android Studio and Java programming language. For data storage in the application using a data base.

This application that has been made can make it easier for event owners to order the desired musician. The application can run as expected and functionality testing with several scenarios carried out can be seen that the results are all valid. In the musician empowerment application and the survey that was filled in by 23 respondents, it can be concluded that the presence of musicians' music and musician experience information can attract buyers to order musicians. A survey that has been filled in by 23 respondents, it can be concluded that the existence of the assessment and review functions in the ordering application can make ordinary musicians become professional musicians.
