# ABSTRACT

*The most numerous Muslims is in Indonesia. The proof is there are many Muslims places of worship which can be found easily, that name is the mosque. The mosque is not just a place for worship, it is also a place for Muslims gathering. There are various kinds of activities carried out in the mosque. The kinds of activities start from big activities until daily activities. Information dissemination of those activities is spread out from person to person, or distributing sheets of paper and then stick them in the mosque area. At present, almost all of the information can be accessed or stored via online into the type of application like website or others. The Web-Based Mosque Portal Application (Information and Content Management Module) is an application to distribute information from various mosques. The information is about the activities, religious articles, as well as the information of the mosque itself. The name of the application is RONA Mosque. Why RONA Mosque? Rona comes from the phrase "Routine Activity". Rona means light or color so that the mosque can be interpreted as the light of the mosque. The purpose of this application is to gather information from various mosque, to build information media that presents information about mosque activities according to their interests, limited time, and types of information. This application is built in the website version with the Prototype method, using the PHP programming language, MySQL database and Laravel Framework.*

*Keywords: mosque, mosque activity information, Islamic activities, website.*
