ABSTRACT

Utilization internet right now has entered in half citizens life RT/RW but utilization information technology in RT/RW still not much used to support RT/RW activities. Activity like create meeting invitation letter, create minutes of meetings, and archieving in RT/RW environment still done with save tii much archieving letter in RT/RW post. With many amount of archieve and create meeting invitation letter and minutes of meetings searching data if want to seen it used long time and not efficient. Citizens sometimes forget about meetings and activities in RT/RW can cause the activity not maximum. So, right now is required application that can help RT/RW management to manage meeting/activity announcement and manage archieve in RT/RW environment. This application was designed used PHP with CodeIgniter framework and MySQL database.
