*The population of resident in Bandung city was increasing during 2015-2018, this also means that there's an increase in the amount of woman who's in their fertility (Age around 15-49 years old) with the possibilities of them pregnant around 108.816 person. There are some factors that explain why some of the woman death during their pregnancy phrase and lost their baby some of them happened during their pregnancy phrase, childbirth, and postpartum. The death can be caused by the service from the hospital, hospital referral system or the hospital facilities that's not fit the standards. Therefore in order to minimize the possibilities of this phenomenon happen in the future, the medical team and the hospital needs to make sure that every woman and their child receive a proper treatmeant during the pregnancy, childbirth dan postpartum phrase.*

*Healing Environment is an applied science of the principles contained in environmental concepts, and is used in designing the interiors of Mother and Child hospitals. The concept of healing environment itself use a psychological approaches since its concept is to heal the patients using therapeutic methods from the environment. Healing Environment concept combine physical and psychology aspect while using atmosphere of the place and the use of the place's elements such as circulation, colors, shape, material, nature, even lighting. The application of the healing environment principle aims to stimulate the healing process of the patient in terms of body, soul, and mind faster and balanced. There are few method that's used in this paper such as finding the objects, collecting the data surveys, studying the literature and ideal precedents, and analyze the data. The purpose of this study is to understand the proper way in designing hospital that suit the mother and their baby's needs also suitable for the hospital with grade B according to the government regulation and users psychological aspect, in order stimulating the healing process faster and reducing the possibilities of stress for the mother and their babies aside from medical aspect.*
