ABSTRACT

The sports club is one of the program activities built by the Telkom University Directorate of Human Resources aimed at employees at Telkom University. This program was officially realized in early August 2019 with 4 sports and the average member per club is 15 member. Over time, the total number of sports becomes 9 and the average member becomes 100 people per club.

From 2019 until now, the process of sports club management and communication management had not been well organized which made all management activities less efficient because the data recorded and available were still vulnerable to being lost and inFormation dissemination was still relatively slow. So that it makes inFormation dissemination from the activities carried out even more difficult to do.

Based on this, a useful application that is useful as a means of administration, monitoring, and useful inFormation not only facilitates the management of each sports club and human resources staff but also makes it easier for employees to see what activities are available or will be held by each sport club branch. The application created is a website-based inFormation system that will be used by employees, club pic and HR staff in carrying out sport club activities.
