

Abstract

Bhakti Medicare is a private hospital that provides health services. Bhakti Medicare Hospital has a business strategy to achieve the hospital's goals. Hospitals currently have implemented information systems, but the current information systems have not fully met the strategy plan. To see what all the necessities are for aligning IS/ IT with business requirements at Bhakti Medicare Hospital. So, it takes strategic planning information systems so that information systems are aligned with business needs. Information system strategic planning, there are several frameworks that can be used, but for the strategic planning of the information system at the Bhakti Medicare Hospital the selected framework use TOGAF ADM. TOGAF ADM was chosen because TOGAF provides a method analyzing the overall business architecture and developing a detailed architecture. TOGAF is also flexible and open source. This study complies a strategic planning for information system that has been analyzed using TOGAF ADM. Then carried out by examining the quality of the strategic planning of information system using the EA score card.

Keywords: Information System, Information System Strategic Planning, TOGAF-ADM, EA Score Card
