

Abstract

Education is one of the important aspects in improving the standard of life of the nation and state, it is also one of the benchmarks of the progress of a nation. Slamet Riyadi Elementary School is one of the educational institutions in Bandung that organizes elementary school level education. However, in this academic service, a manual is still performed which discusses student grades by means of each subject teacher calculating student grades on each sheet of paper or report cards. The unavailability of information applications for conveying student grades that are currently running causes a decrease in the value of slowing the value of delivering grades for student guardians. For this reason a report card application is needed that can improve service to students about quickly getting results while providing teachers with filling in report cards. The school needs an admin user to manage the teacher and student accounts that can access the application. In developing this application the author uses the stages of SDLC development with the Waterfall process model. While the programming language used by the author is PHP and uses a MySQL database.
