ABSTRACT

*BAVIT (*Bandung *Visit Travel*) : *Application Tourism Module Accommodation (Hotels and Transportation) is a website-based application that is used to help tourists in finding information about tourism including attractions, lodging closest to attractions and transportation routes. This application was made to obtain information on attractions, lodging and routes carried out separately and does not provide comprehensive tourism information. Build this application using the Prototype method, built with the CodeIgniter framework, PHP programming language, MySQL database and editor tools using Sublime text. With this application, it is expected to be able to help tourists in getting information about attractions, nearby lodging from attractions and transportation routes from attractions to lodging.*

Keywords: Tourism, CodeIgniter, Prototype, Website
