

ABSTRACT

Good waste management is very much needed for the common interest, and is expected to have a positive impact on everyone who is affected, be it the public or officials. If waste management goes well, it can support the realization of the welfare of the community and the surrounding environment, which is desired by everyone, so that a healthy, clean and beautiful environment can be created. In the city of Bandung, the volume of waste in the city of Bandung itself is very high, reaching up to 1,600 tons per day and always increasing by approximately 10% per day. With waste data of this magnitude, this study is focused on the officers who carry out their duties in managing waste in the community. The focus of this study is to think of solutions for the workload of officers and the health impact of officers in carrying out their work.

Keywords: Trash, Cleaning Staff, Management Trash.
