ABSTRACT

Human resources information system so important to manage employees on company, but in Bandung Techno Park system for manage competency and job profile still manual, every data keep it in paper form based on Microsoft Excel form template, so data often lost and pending In the approval process. The solution given is make a system information to help hr for manage competency and job profile employees, this system information is human resource information system at bandung techno park for competency based human resource management module 1. This system information system can manage competency and job profile employees. Method of manufacture for analysis software is prototype method. Database used MySQL and the framework is codeigniter (CI). The software testing used black box testing. Hopefully this system can facilitate hr in bandung techno park.

Keywords: Management, HR, Prototype, MySQL, CI, Black box testing
