ABSTRACT

The donation management application is an application that will be used to facilitate the management of street children activities and to finance certain needs to develop their interests and talents. This application will cooperate with several foundations engaget in the same field for the survival of more decent street childer.

This final project was created by the Waterfall Software Development Method (SDLC), Unified Model Language (UML) to model the system, and use the PHP programming language with the Codeigniter Framework as well as the MySQL database and other software.

Keywords: yayasan, street children, web, codeigniter, and MySQL
