

List of Tables

3.1	Data structure to reconstruct the path	19
4.1	The number of step recognize based on path a scenario testing. .	28
4.2	The number of step recognize based on path b scenario testing. .	28
4.3	The number of step recognize based on path c scenario testing. .	28
4.4	The number of step recognize based on path d scenario testing. .	29
4.5	Level of accuracy (%) step recognized based on path a scenario testing.	29
4.6	Level of accuracy (%) step recognized based on path b scenario testing.	29
4.7	Level of accuracy (%) step recognized based on path c scenario testing.	30
4.8	Level of accuracy (%) step recognized based on path d scenario testing.	30
4.9	The number of step with the best value of threshold is 0.3 . . .	31
4.10	The number of step with the constant optimum value of threshold is 0.1	32
4.11	The number of step with the best value of threshold is 0.3 in multi-floor	32
4.12	Level of accuracy (%) of step recognized for all device positioning using the best value of the threshold is 0.3	32
4.13	Level of accuracy (%) of step recognized for all device positioning using the constant value of the threshold is 0.1	32
4.14	Level of accuracy (%) of step recognized for all device positioning using the best value of the threshold is 0.3 in multi-floor . .	33
4.15	The number of step recognized from the system with the angle of device position is 0° and the comparison of the best threshold in single floor.	37
4.16	The level of accuracy (%) step recognized from the system the comparison of the best threshold and with the angle of device position is 0° in single floor.	37

4.17	The number of step recognized from the system with the angle of device position is 0° and the comparison of the best threshold in multi-floor	38
4.18	The level of accuracy (%) step recognized from the system the comparison of the best threshold and with the angle of device position is 0° in multi-floor.	38
